Ball Valve Lockable Stop Plates

Approximately one year ago, Inserta[®] introduced the “Universal” ball valve lockable stop plate. This lockable stop plate was developed to address potential interference issues when a flange or Rotational Adapter are clamped directly to face 1 of the ball valve.

The standard “L” lockable stop plate, and the “U” Universal lockable stop plate are functionally equivalent, and very similar in geometry. The height of the Universal lockable stop plate is more than the standard lockable stop plate (please refer to catalog, website, or product data sheet).

Effective immediately, the 6*12 through 6*20 ball valves will be provided with a Universal lockable stop plate as standard. The 6*24 through 6*48 ball valves will be transitioned to the Universal lockable stop plate as standard later this year.

Inserta[®] will continue to make the “L” lockable stop plate available as an option.

Sincerely,

Inserta[®] Products
